

# TableLocate™ System

**Streamline service, increase table turnover and improve customer satisfaction with a system that is easy to install and requires minimal staff training.**

- World's only location technology guaranteed to work for 3 years without a battery change, saving you time and money
- Patented 1-minute wireless charging means less pucks to buy - no need to have multiple spares charging
- Our LOC8 router talks to tablets via WIFI (no PC maintenance required). Our advanced technology dramatically reduces costs
- Suitable for indoor and outdoor dining areas
- Reports to analyse historical activity of pucks

## HOW DOES IT WORK?

LOC8 pucks work just like a GPS, guiding staff directly to your customers.

Bluetooth iBeacons are fitted under tabletops (invisible to the customer). Pucks (displaying a number) are handed to the customer, the puck is detected once the customer is seated and displayed on a serving counter tablet for your delivery staff.

1. Enter puck number into the POS system
2. Provide the customer with the puck after order service
3. Customer selects a table
4. Location of customer is displayed on map or list
5. Staff delivers food promptly

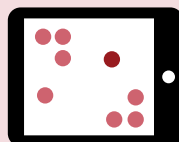

### THE SMART TABLE NUMBER

Hand out puck when paying
